## For Immediate Release

### **Producers Encouraged to Enroll in CSP by September 30** *NutriSphere-N<sup>®</sup> qualifies for Conservation Stewardship Program payments*

LEAWOOD, Kan. (Sept. 29, 2009) –Growers using NutriSphere-N Nitrogen Fertilizer Manager qualify for payment through the new Conservation Stewardship Program (CSP) because of its role in reducing nitrogen fertilizer volatilization and protecting against denitrification.

“Environmental stewardship is a core value for SFP,” says Dr. J. Larry Sanders, president and CEO of SFP. “NutriSphere-N keeps nitrogen fertilizer stable instead of volatilizing into the air or leaching into groundwater, helping growers and the environment.”

CSP, a voluntary conservation program created by the 2008 Farm Bill, provides financial and technical assistance to conserve and enhance soil, water, air and related natural resources. The program encourages agricultural producers to improve conservation systems by undertaking, improving, maintaining and managing existing conservation activities.

Growers interested in the CSP program need to apply by the September 30 deadline to be considered for 2009 funding. However, applications received after September 30 will be considered for future CSP funding.

For more information about the new CSP and how to apply, visit the [Conservation Security Program Web site](#) or contact your local NRCS Service Center.

For more information about SFP and its line of fertilizer enhancement products, call 1-888-446-GROW or visit [www.sfp.com](http://www.sfp.com).

#### **About SFP**

*Headquartered in Leawood, Kan., SFP is an innovative agricultural company that has developed a line of revolutionary products to improve fertilizer efficiency. The company's flagship products, AVAIL<sup>®</sup> Phosphorus Fertilizer Enhancer and NutriSphere-N<sup>®</sup> Nitrogen Fertilizer Manager, are designed to be added to a farmer's existing fertilizer to improve availability of the nutrients, in turn boosting crop yield potential by 10 to 15 percent. The company operates management, research, and manufacturing facilities in Kansas, Illinois and Ohio and has relationships with key distributors throughout the United States. In addition to domestic operations, SFP's international distribution includes Canada, United Kingdom, New Zealand and the Philippines. For more information on SFP and its products, visit [www.sfp.com](http://www.sfp.com).*
